

We see your strength.
Let us support your journey.

We are here to help.

Medication-Assisted Treatment (MAT) combines FDA-approved medications with counseling and behavioral therapies to treat substance use disorders. At Denver Recovery Group, MAT is offered in a supportive, judgment-free environment to help individuals achieve and maintain recovery.

What is MAT?

1

Assessment and Personalized Plan

We start with a comprehensive assessment to understand your medical history, current challenges, and recovery goals. This information helps us create a treatment plan tailored to your needs.

2

Medication and Counseling

MAT uses safe, FDA-approved medications to reduce cravings and withdrawal symptoms, paired with counseling and therapy to address the emotional and behavioral aspects of recovery.

3

Manages Cravings and Withdrawal

Your recovery journey is unique. We monitor your progress closely, adjust your treatment plan as needed, and provide continuous support to help you stay on track.
